

With the **LOL** you can widen your soaring possibilities.

LOL

The LOL bridges the gap between standard Paragliders and the Swoop.

Nervures have achieved this balance to give this glider the best of both worlds.

Trims are the key to changing the glider's behaviour; like a Paraglider with the trimmers full on, like a speed flying wing when they are fully off. Because of this the LOL drastically widens the range of possibilities and sensations available to mountain fliers, expedition's lovers or soaring pilots.

The wing is very user friendly. It is ready to launch in no time with the short lines making it easy to use even on a tight take-off. One pull on the A and it is above your head.

What is so striking about the LOL besides its range of flying possibilities is its compactness. The standard version is already small; however the ultra version is amazingly small: properly folded it takes less room than a small rucksack and weights only 2.7 kg.

Thanks to the trims you don't have to worry about the accelerator. The take off is instant, ideal for those tricky mountain launches. In flight the glider is fast and responds precisely to inputs making it fun to fly. The turn circle is very tight allowing you to core narrow thermals but you can also re-adjust to make it flat turn.

nervures.com

With the trimmers off, the acceleration is remarkable. The substantial speed range is fully usable and the LOL shows the other side of its character, diving with fast trajectories allowing carving and swooping along the slope.

Turbulence? The untrimmed profile has been specifically engineered to resist turbulences.

At landing you can experiment to discover the intoxicating feelings of flares; or on restricted and tricky landing the LOL will accept being slowdown and will keep enough power to flare properly.

The LOL is available in 2 versions; light for general usage, with the same durability as the rest of our lightweight range. The ULTRA, is ultra light and ultra compact and is targeted at the extreme mountaineering, long trip or trekking addicts where every grams and volume gain makes a difference.

*Every adventure has a reason to discover
how the LOL defy conventions.
Gentle trek flight or Speed flying?
New kind of soaring or paragliding?
It is up to you to sculpt the air according to your mood,
the LOL is ready for it are you?*
